## Audiophile wireless sound from any source.

No need for external amplifiers, cables, hubs, transmitters etc.

Reference Wi-Fi floor standing speaker pair, with integrated amplifier, receiver & transmitter

- External, rotating tweeter for wide sound dispersion without diffractions.
- Dual chamber design and bass reflex port for powerful, room filling low frequencies.
- Excellent dispersion for a totally realistic, wide soundfield.
- Electronic protection for safe operation on high listening levels.

# Functionality & Flexibility

## Multiroom

www.WirelessMultiroom.com

Control your music **in every room individually**

### Single-user / Single-source

### Multi-user / Multi-source

No need for a home network - No "bridge" necessary

## Multisource

www.WirelessMultiroom.com

Play your music **wirelessly from any source**

## C. Why... WiSound?

### All sources redirection

#### Redirect any music source

Few rival products support Bluetooth-to-Wi-Fi retransmission (taking a Bluetooth music source such as your smartphone and relaying it across the multiroom network via Wi-Fi). WiSound products also re-transmit to Wi-Fi from any of your sources including USB, or analogue or optical wired connection.

### Personalized presets

#### One-touch access to your music with personalized presets

Our speakers feature a number of presets that you can easily set (and change) directly on the system or with the free app. Instantly, your favorite music plays at the touch of a button, just like on your car radio.

### Infrared remote

#### Control instantly your speaker

You can choose your presets and input selection, adjust the volume and more, at once, with no need for a smartphone/tablet/PC

### WiSound acoustics

#### Enjoy the best of the best

WiSound technology is famous worldwide for its unsurpassed pure and precise sound, with balanced directivity. "Place it anywhere, hear perfection everywhere."

### Integrated Media Server

#### Share your speaker's attached USB media

You can attach a USB storage media device to any Wisound Wireless speaker, and share its songs to any UPnP/DLNA player in your home network

### Choice of colours

#### Choose your speaker from a variety of colours

You can choose from a variety of colours the one that suits your interior, your mood, and your personality

## Competitors

### Few sources redirection, and for some, no Bluetooth at all!

#### You cannot redirect any music source

Most of our competitors do not support audio redirection to Wi-Fi from their various inputs - Bluetooth, USB, optical and analog. Furthermore, many of them have very few inputs.

### No presets at all!

#### You cannot have one-touch access to your music with personalized presets

Most of our competitors offer no presets at all, and you need to start tuning from scratch, every time you want to hear music from a different service.

### No Infrared remote!

#### You cannot control instantly your speaker

Most wireless speakers come without a remote, so for every adjustment - e.g. to turn the volume up - you have to look for your smartphone, turn it on, find the speaker's app, turn it on, look for the volume control and finally alter the volume.

### Conventional acoustics

#### You cannot enjoy the best of sound

Conventional speakers only sound at their best when placed in specific positions, and only to someone sitting within a narrow window directly in front of them

### No Server, no USB!

#### You cannot share your speaker's attached USB media

In most other wireless speakers not only you cannot share a USB storage media device, but you cannot even attach one, due to the absence of a USB port

### Only one colour!

#### You cannot choose your speaker's colour

One colour to choose from? Boring!

# Acoustic advantages

## WiSound Speaker

Drivers firing forward, sideways and upwards

## Conventional Speaker

Front-firing speakers only

## Live Music

Sound towards all directions

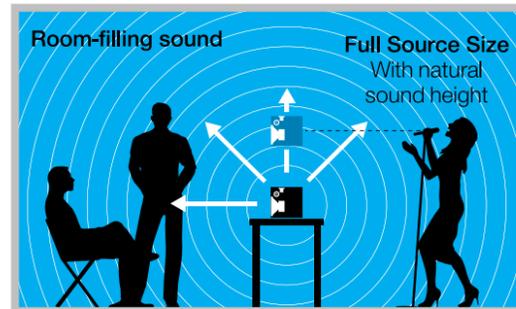

- Enjoy:
- A. everywhere in the room
  - B. natural, lively and balanced sound

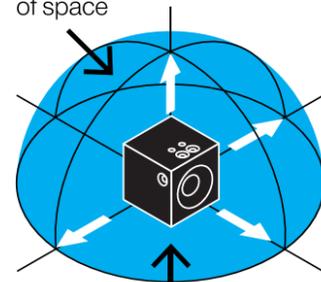

The WiSound speaker's unique design achieves the optimal tonal balance whilst creating a "spherical response" throughout the room's space.

The result is big, vivid, natural, finely-detailed sound, **anywhere in the room.**

### Wide Dispersion of Sound

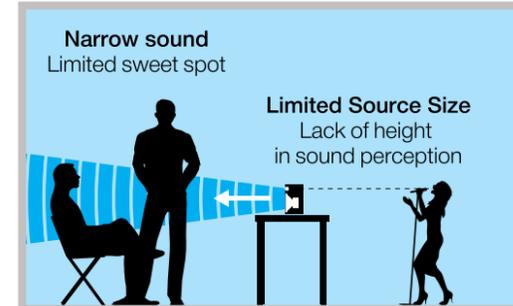

Rich feeling of space

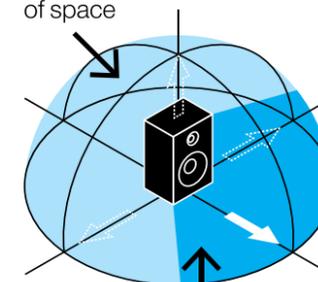

Wide dispersion with **zero** directivity

### Narrow Dispersion of Sound

Narrow feeling of space

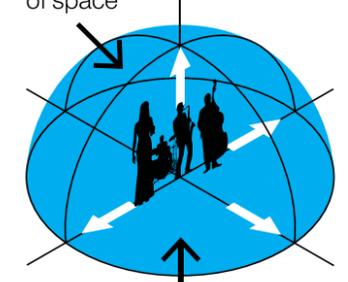

High directivity

### Wide Dispersion of Sound

Rich feeling of space

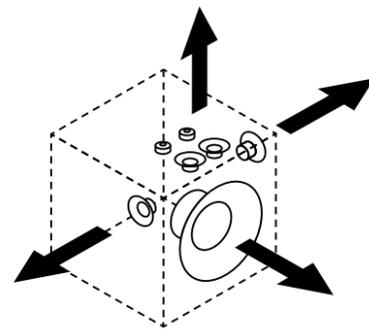

Wide dispersion with **zero** directivity

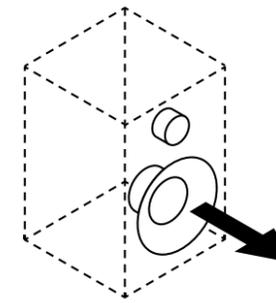

## A. Balanced Speaker Directivity

### Listen to a perfect sound at any spot of the room

Gone is the confining 'sweet spot' of traditional audio systems, where the sound is heard correctly in just one part of the room. Now you're free to sit or stand wherever you like. WiSound technology delivers the same tonal balance wherever you are in the room. The result is to give the sound the right dimension of height.

## Narrow Sound Directivity

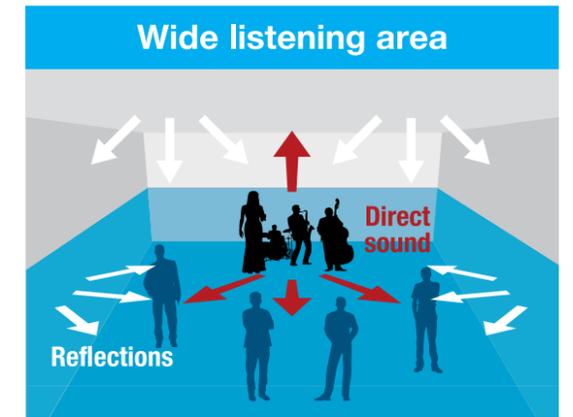

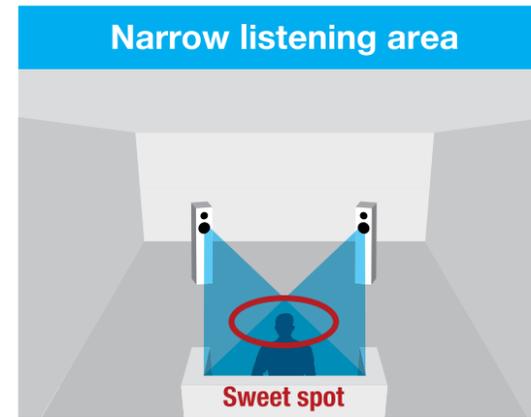

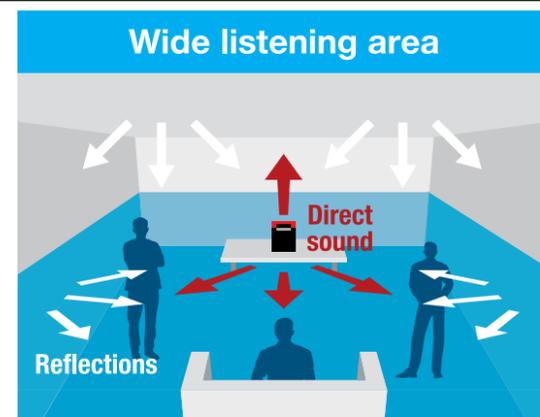

## Balanced Sound Directivity

## B. Ideal "In-Room Response"

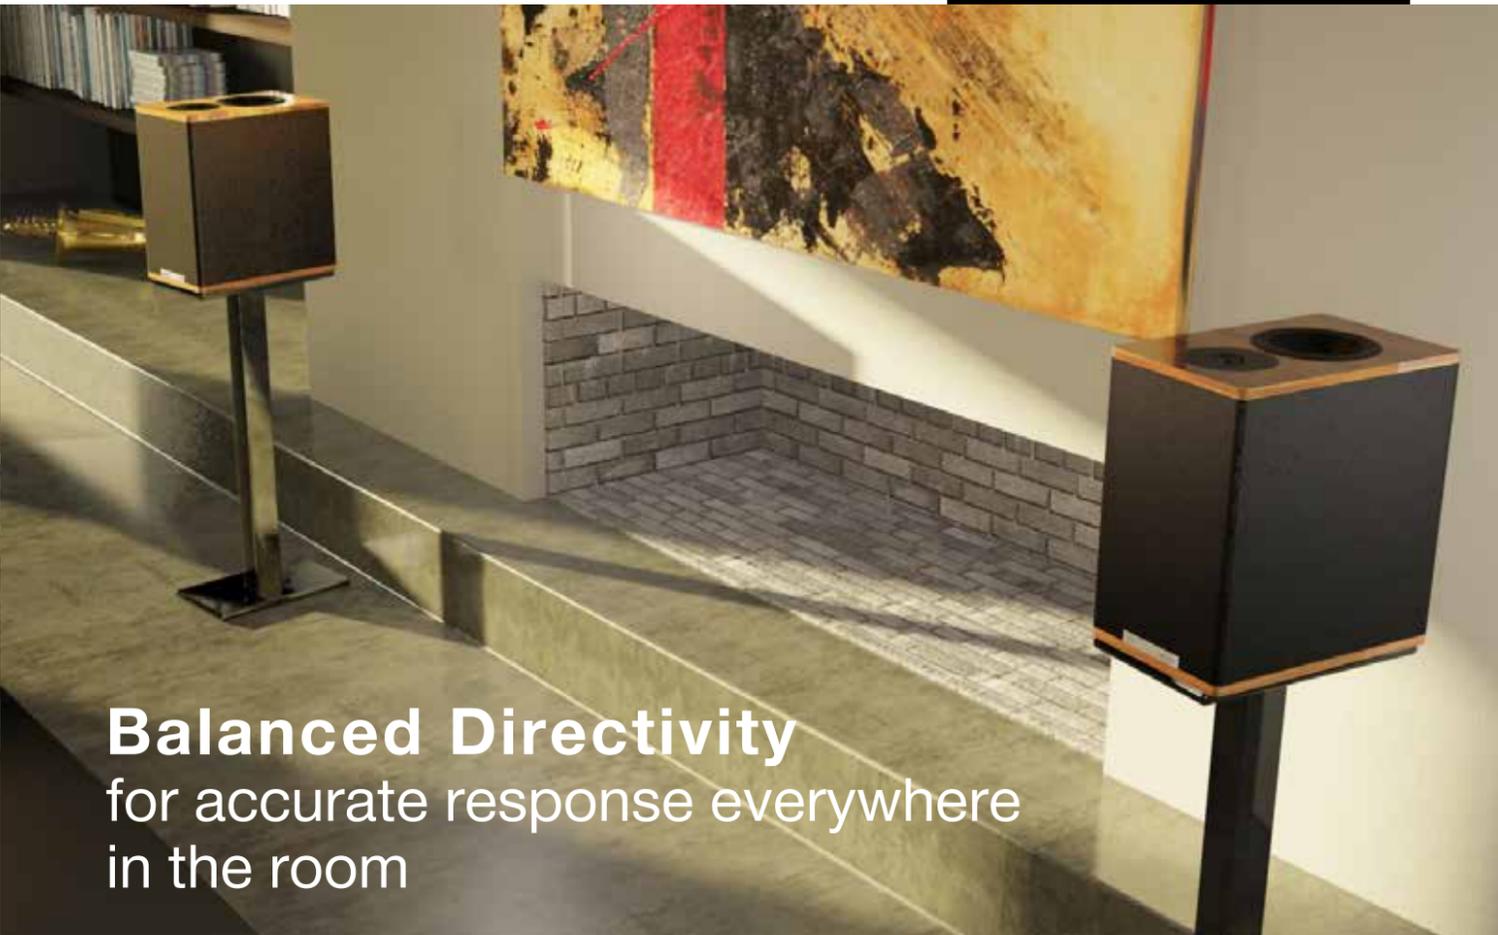

### Balanced Direct & Reflected Sound

Feel the **Full Sound Power** of the orchestra in the room. Every room has surfaces that reflect sound, and in fact it is these reflections that give music much of its life and vibrancy. WiSound speakers are designed to use the room's reflections, in all directions equally. This results to a natural, vibrant, large-scale, exciting and dynamic sound everywhere in the room.

**360° Controlled Directivity**  
with additional presets for simulation  
of many famous monitors

**Balanced Directivity**  
for accurate response everywhere  
in the room

# Monitor 8

**The ultimate speakers**  
for sound engineers and  
high - end audiophiles

- 8 Drivers with Balanced Directivity for wide sound everywhere in the room
- Ideal In-Room response
- Incredible Bass down to 35Hz
- Additional presets to simulate the directivity of many famous monitors

Enclosure material	Wood MDF
Grille material	Textile

WiSub is designed as a special ultra-bass subwoofer with very deep and powerful extension into the very lowest frequencies below 40Hz.

As a result, WiSub can also be used as part of our modular wireless multi-room concept, and can be added to a system comprising several full-range WiSound speakers, such as Cuby 9 (each including its own active subwoofer).

In a WiSound configuration, WiSub comfortably takes care only of the very deepest bass frequencies – set it to play 40Hz and below.

# WiSound

## MULTIROOM

### Wireless multi-room music system

#### Forget wires and the trouble that goes with them

The WiSound multi-room system delivers music throughout the house wirelessly, using your home Wi-Fi network, or alternately establishing its own.

### A speaker for every room

#### Play your music throughout the Home

With our WiSound multi-room system, you can enjoy music in every room of the house. Just place a speaker in any room and start instantly listening to your favorite tunes.

### Simple to set up, Easy to use

#### Enjoy an easy and trouble-free multi-room system

It's never been easier to set up and control a wireless multi-room system. Simply use our free app on your smartphone/tablet, and fill your home with music in seconds.

### Perfect sync in every room

#### Manage multiple systems in different rooms

Using our app, you can stream a different song in each room, group rooms together in zones for different music in each zone, or hear the same song everywhere in perfect sync.

### One App controls everything

#### Control your whole multi-room System from one app

With our free app, available for both Android and iOS, you can control your whole WiSound multi-room system from your Smartphone/tablet. You can alter the settings of each speaker individually, or all of the system at once, as well as manage your rooms, access your stored music and streaming services, and more.

### All your sources together

#### Access all your music from one place

You can select and play your favorite songs in an instant, no matter where in the house you are, or where the songs are stored in your home network.

### All the world's music in your hand

#### Stream music and radio via your smartphone or tablet

You can wirelessly play music streaming services and Internet radio directly from your iPhone, iPad, iPod or Android device.

### Streaming services

#### Enjoy music from streaming services

The WiSound multi-room system not only fully supports streaming services like Deezer, Spotify and Pandora, but also plays music from them directly, leaving your smartphone or tablet free to be used for other purposes.

### Deep, crystal clear hi-fi Sound

#### Enjoy the best of the best

WiSound is famous worldwide for its unsurpassed pure and precise sound. Now with our multi-room system, we have combined the sound quality of WiSound with the best Wi-Fi music system, delivering the very best of both worlds.

### Internet Radio

#### Tune in to countless Internet radio stations around the globe

The WiSound multi-room system incorporates the TuneIn service, giving you direct access to countless Internet radio stations of every type and genre, around the globe.

## any source to any room

### Fully expandable

#### Start with one music player, expand everywhere

The WiSound multi-room range is a complete family of products. You can begin building your wireless multi-room system with just one speaker, and later add further speakers all around your home, as and when you want to.

### Two units together for perfect stereo

#### Create a stereo pair and hear voices and instruments as if they were in the room

You can use two WiSound wireless speakers together, as a stereo pair for true left/right separation.

### Source redirection

#### Redirect any music source

WiSound speakers are equipped with Bluetooth, USB, optical and analog inputs that not only allow playback from the relevant sources, but also retransmission to one or more other WiSound players, with the music perfectly synchronized.

### No skips, delays or drops

#### Play your music with confidence

Our WiSound wireless mesh network technology provides whole-house coverage, ensures synchronous music playback, and avoids sources of wireless interference.

### Personalized presets

#### One-touch access to your music with six personalized presets

A WiSound multi-room speaker features a number of presets that you can easily set (and change) directly on the system or with the free app. Instantly, your favorite music plays at the touch of a button, just like on your car radio.

### Automatic software updates

#### Stay updated with new features and services

WiSound multi-room is constantly improving, with new features and services. As soon as a new feature emerges, your system will automatically update itself.

### Built-in accelerometer to swap channels

#### Place the speaker wherever you want

Our soundbars and soundbases can be placed on either a table or on the wall. The built-in accelerometer detects orientation and adjusts the equalization and channels accordingly for perfectly delivered sound.

## Also...
